Office Action Summary

Application No.

09/557,643

Applicant(s)

LI, SHULONG

Examiner

Ms. Arti Singh

Art Unit

1771

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-17 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date ____.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date ____.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: ____.

DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 05/24/03 has been entered. All previously made rejections are now withdrawn and new rejections have been set forth below.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3, 8-11, and 16-17 are rejected under 35 U.S.C. 102(e) as being anticipated by or in the alternative under 35 USC 103 (a) as obvious over VEIGA et al (USPN 6,239,046).

Veiga et al. teach a coated textile fabric for use in an airbag (air curtain- column 1, line 28 & column 2, line 34, which is also synonymous in the art as a side curtain, as it is positioned laterally to the occupant) having a plurality of polymeric layers coated thereto (column 1, lines 5-10). The fabric, being a woven, knit or nonwoven textile is first coated with a polyurethane layer, which is then coated with a layer of elastomeric polysiloxane (column 1, lines 50-55). The polyurethane coating weight applied is about 0.3-ounces/square yard to about 1.5-ounces/square yard with 0.5-ounces/square yard preferred (column 1, lines 57-59). In an alternative embodiment as shown in column 3, lines 39-50, the fabric may be coated on both sides with a polyurethane coating which is similar in its composition and physical properties to the first polyurethane layer. With regard to Applicant's claims, the required coating of both the polyurethane layers at the most would add up to 1.5 ounces per sq. yd + 0.5 oz. per sq. yd = 2.0 oz. per sq. yd (Patent Claims 22 & 23). Thus, Veiga et al. teach a side impact air bag having at least one layer of a polyurethane coating wherein the coating has an add-on weight of at least 0.3 to about 2.5 ounces/ square yard. The composite may be laminated on both sides with polyurethane coatings.

Veiga et al. disclose what is set forth above, however Veiga et al. fail to disclose or do not explicitly teach the claimed airbag having the leak down time after inflation nor the

Art Unit: 1771

elongation at break however it is reasonable to presume that the said featured properties are inherent to Veiga et al. Support for said presumption is found in the use of like materials i.e. a side airbag coated with polyurethane coating system having an add-on weight of at most 3.0 oz/yd², which would result in having this property. The burden is shifted to Applicant to prove otherwise. In re Fitzgerald 205 USPQ 495. Alternatively, the presently claimed properties of the leak down time after inflation nor the elongation at break would obviously have been present, along with the tensile strength, once the Veiga product was provided. See In re Best, 195 USPQ 433.

It should be noted that the other references by Veiga et al, namely USPN 6,770,578 and USPN 6,734,123 could also have been cited as 102/103 rejections however it would be redundant.

5. Claims 1-17 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over USPN 5,989,660 to Moriwaki et al.

Moriwaki et al. discloses a fabric for use in an airbag comprising a fibrous substrate having adhered to it a covering layer made of a thermoplastic synthetic resin (abstract). The fibrous substrate or fabric used by patentee can be a woven, knitted or nonwoven fabric formed from polyamide fibers (column 2, lines 33-36). The fibers that make up the fabric have a denier of 200-500 (column 3, lines 8-10) and a cover factor of 1700 to 2500 denier (column 2, line 10). The fibrous substrate can be woven from polyamide fibers of nylon 6,6 (column 2, lines 33-35), wherein the monofilaments are 6 g/denier or more (column 2, line 65). The synthetic thermoplastic resin that forms said covering layer is found to be equivalent to Applicant's film layer, and may be polyurethane, polyester, polyamide, acrylic polymer, polyethylene or polypropylene, of which polyurethane and polyester are the most preferred (column 3, lines 20-25). The average thickness of the synthetic thermoplastic film

Art Unit: 1771

formed on the surface of the woven substrate is 10 microns or less, which when converted equals 0.393 mils, and thus meets the limitations which require the film thickness to be from 0.1 to about 3.5 mils thick.

The air bag produced using such a base fabric for air bags can be used as an air bag, for example, for a driver's seat, an air bag for a front passenger's seat, an air bag for a rear seat or an air bag for expansion from a position laterally of an occupant of a seat (column 4, lines 31-39).

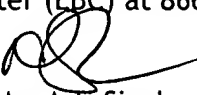

Veiga et al. disclose what is set forth above, however Veiga et al. fail to disclose or explicitly teach the claimed airbag having the leak down time after inflation nor the elongation at break properties. However it is the Examiner's position that it is reasonable to presume that the said featured properties are inherent to Veiga et al. Support for said presumption is found in the use of like materials i.e. a side airbag coated with polyurethane coating system having an add-on weight of at most 3.0 oz/yd², which would result in having this property. The burden is shifted to Applicant to prove otherwise. In re Fitzgerald 205 USPQ 495. Alternatively, the presently claimed properties of the leak down time after inflation nor the elongation at break would obviously have been present, along with the tensile strength, once the Veiga product was provided. See In re Best, 195 USPQ 433.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ms. Arti Singh whose telephone number is 571-272-1483. The examiner can normally be reached on M-F 9-5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on 571-272-1478. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
